

# Paygistix® EMV Solution for Micros® POS

Cutting edge EMV payment integration solution for Micros® RES 3700, 9700 and Symphony line of POS systems. Features and highlights of our best-in-class solution include:

- Provides immediate support for EMV chip cards and NFC transactions including Apple Pay®, Android Pay® and other mobile wallets
- Supports traditional & suggested tip adjustment for all EMV Chip transactions (including Chip & PIN)
- Built-in automatic 3G wireless failover in the event of an internet outage for only \$10 per month (D210S only)
- Removes the POS computer from the scope of PCI DSS and Visa's QIR mandate
- Reduces merchants' PCI DSS Scope to SAQ B-IP
- Isolates cardholder data to purpose built payment devices which sends that data directly to the Paygistix Gateway via an encrypted TLS channel
- Utilizes tokenization so the Micros POS system never touches or sees real cardholder data
- Real-time online access to transaction data with the ability to perform maintenance functions such as adjusting transactions, issuing full or partial refunds and running repeat sales. Never again will a store manager have to contact an upstream provider to retrieve a card number!
- Supports traditional table service workflow with PIN Bypass capability, integrated pay-at-the-table workflow with wireless payment devices, customer self-checkout workflow via our web-based application and a traditional QSR workflow
- Supports QSR workflow with customer facing EMV payment devices with features including digital signature capture for receipts, NFC for faster checkout and added security by ensuring the card never leaves the customer's hand and logo branding on the device screen

"The POS support team is very helpful, knowledgeable and flexible. They worked with me to avoid any interruption to my business and to ensure a smooth transition. There was a sense of ownership that I felt from Payment Logistics when they implemented the EMV solution that helped me feel at ease with the process. The solution itself is self-sustaining and very easy for restaurant employees to work with. Also, the addition of Apple Pay has been great - customers love it and it speeds up checkout!"

- Vijay M., Owner NRV Eateries
